MicroFilm Box Label Printer v1.5

This program was originally developed for use in FamilySearch Centers. You fill in the blanks and it prints one or more labels on plain paper, which you then cut on the lines to produce labels that can be taped to the top of film boxes to identify them.

The fields are required to contain reasonable data, except for the Order No. field, which is optional.

After entering the film number, you may press the **Get Info** button. It will display the FamilySearch Library Catalog entry for that film. You should then open the Search Results link(s) on the Website to display the Title, Notes, etc. You may then highlight that information, copy, and paste it into the Description field as you like. Note the "For a printable version of this record click here" which may be the best place to copy from.

You may press **Tab** (or **Enter**) to move to the next field, or **Shift-Tab** to move to the previous one.

The Order No. field may contain any information, or left blank.

To make additional labels, click **Next** or press **Page Down**. You may also click **Back** or press **Page Up** to review previous entries. You will get a message when the page is full.

The **Print** button will print the labels. **Tip:** Cut your paper to produce two **4.25 x 11"** pieces. This will save you paper. Load the paper centered in the paper path.

If you want to print more labels than will fit on one page, you must close the program and restart it.

The installation process copies files to the installation directory **C:\Program Files\CWShop** (or **C:\Program Files (x86)\CWShop** for 64 bit systems) , and optionally creates entries in the Start Menu and a shortcut on the desktop. The uninstall function removes all traces of the program.
